Paper 1: The relationship between capacity utilization and inventory investment

Publication Year: 2007

Author: Sumathi R

Nutrition has been defined as food at work in the body. Nutrition includes everything that happens to food from the time it is eaten until it is used for various functions in the body. Nutrients are components of food that are needed by the body in adequate amounts in order to grow, reproduce and lead a normal healthy life. Nutrients include water, proteins, fats, carbohydrates, minerals and vitamins. There are several nutrients in each of the groups: proteins, fats, carbohydrates, minerals and vitamins, hence the plural form of these words has been used. Thus there are over 40 essential nutrients supplied by food, which are used to produce literally thousands of substances necessary for life and physical fitness.

Paper 2: Application of the project

Publication Year: 2004

Author: Karen Eich Drummond

You are in charge of a nutrition education program that includes cooking classes taught at farmers' markets to recipients of the federal Supplemental Nutrition Assistance Program (SNAP) in an urban setting. The purpose of your program is to improve eating habits by helping participants plan, buy, and prepare healthy meals using produce from the farmers' market. Describe one way to evaluate the program using quantitative methods and two ways to evaluate it using qualitative methods. Also, describe two ways in which the quantitative and qualitative data will differ from each other.
